(a) Memory held / usefulness
share of cache bytes held by maintained groups
share of maintained groups hit at least once
fraction
write ratio (50% inserts / 50% updates)
(b) In-memory copy work
KVs copied into groups (CPU-work proxy)
flush seeding, per flush
completion, per compaction
write ratio (50% inserts / 50% updates)
(c) Maintained groups never used
flush-seeded
completed
fraction never hit
write ratio (50% inserts / 50% updates)
